by SEMrush

# Google Search Operators Cheat Sheet

No.	Operator	What does it do?	Category	Deprecating? These ones can be unreliable
1	" "	Allows searching for a specific phrase - exact match search. Individual word prevents synonyms	Basic, Mail	
2	OR	Boolean search function for OR searches as Google defaults to AND between words - must be all caps	Basic, Mail	
3		Implements OR	Basic	
4	()	Allows grouping of operators and helps dictate order	Basic, Mail	
5	-	Excludes a word from results	Basic, Mail	
6	*	Acts as a wildcard and will match any word or phrase	Basic	
7	#..#	# represents a number in this instance. Use to find numbers in a series.	Basic	
8	\$	Allows for search of USD	Basic	
9	€	Allows for search of Euro	Basic	
10	in	Allows searches for unit conversion (currency, unit or measure)	Basic	
11	~	Prefix - Include synonyms (potentially defunct)	Basic	✓
12	+	Prefix - Force exact match on single phrase	Basic, Mail	✓
13	<b>daterange:</b>	Return results in a specified range (requires julian dates)	Advanced	✓
14	<b>link:</b>	Find pages that link to the target domain	Advanced	✓
15	<b>inanchor:</b>	Find pages linked to with the specified anchor text/phrase. Data is heavily sampled.	Advanced	✓
16	<b>allinanchor:</b>	Find pages with all individual terms after "inanchor:" in the inbound anchor text.	Advanced	✓
17	<b>inposttile:</b>	Finds pages with keywords in their post titles (i.e. for researching blogs)		
18	<b>define:</b>	Pulls a card response from Google displaying the dictionary definition of the word or phrase	Advanced	

# Google Search Operators Cheat Sheet

No.	Operator	What does it do?	Category	Deprecating? These ones can be unreliable
19	<b>cache:</b>	Returns the most up to date cache of an indexed web page	Advanced	
20	<b>filetype:</b>	Returns only files of a particular type associated with the keyword searched	Advanced	
21	<b>ext:</b>	As above, based on extension	Advanced	
22	<b>site:</b>	Limit results to those from one site	Advanced	
23	<b>related:</b>	Find similar domains to the queried domain	Advanced	
24	<b>intitle:</b>	Returns pages based on the searched query appearing in their title	Advanced	
25	<b>allintitle:</b>	Similar to intitle: but only returns titles where all the words in the title match	Advanced	
26	<b>inurl:</b>	Only returns results where the queried keyword(s) is present in the URL	Advanced	
27	<b>allinurl:</b>	As above but only containing all of the specified words in the URL	Advanced	
28	<b>intext:</b>	Finds pages where the keyword(s) are mentioned within the page content.	Advanced	
29	<b>allintext:</b>	Similar to "intext," but only results containing all of the specified words somewhere on the page will be returned.	Advanced	
30	<b>AROUND(X)</b>	This is sandwiched between two words and the X declares how many words they must be mentioned between. I.e. if it's (4) then the two keywords must be mentioned within 4 words of each other.	Advanced	
31	<b>weather:</b>	Brings up the featured snippet for weather for that location	Advanced	
32	<b>stocks:</b>	Returns stock information for the specified ticker	Advanced	
33	<b>map:</b>	Force google map results for a particular query	Advanced	
34	<b>movie:</b>	Find information for the specified movie (particularly useful when that movie has an ambiguous name). If the movie is still in theatres it'll also return screen times	Advanced
